

JULIE 77, DU

A System View of EIS

Matthew Whyndham, MSSL

Hirohisa Hara, NAOJ

✧ MWT

- The core technical requirements
- EIS subsystems (components) + documents
- EIS interfaces
- Flow of interface information
- Status of the subsystems
- EIS Development Schedule
- Mass Budget
- Power Budget
- Envelope
- Data flow – sensors to ground

✧ HH

- The Solar-B Spacecraft and its environment
- EIS interface information report (to MELCO)
- Spacecraft Development schedule

Essential ... we must achieve
these:

- Deliver Science
- Conform to Spacecraft Accommodation
- Feasible design (cost, schedule and risk)

Desirable: these factors are to be considered where possible:

- enhancements to science return
- technology development (strategic directions)
- nice ideas

	Requirement	Value	Priority
1	Modes	Slit spectroscopy Secondary: Monochromatic imaging, movies ...	
2	Wavelength Range	1. 250-290 Å 2. 170-210 Å	
3	Temporal Resolution	commensurate with evolution of features Control of exposure time is required	
4	Spatial Resolution	< 2 arc sec	
5	Spectral Resolution	< 20 km/s per pixel = 0.0203 Å per pixel	
6	Field of View	Spectroscopy : 4' × 4' (scanned) Imaging: 4' × 2' × 2 fields	
7	Sensitivity	Maximum Throughput ~ 0.5 cm ² at 270 Å	
8	FOV misalignment	TBD arcsex	
9	Alignment measurement	TBD arcsec	
10	Pointing (scanning)	TBD fraction of EIS pixel	

- | A definitive list of subsystems is given in the "System Hierarchy" document :
EIS-sys-des-hierarc - e.g. hierarc3.pdf

Is there a document which explains the nature of each subsystem in relation to the whole and the functionality of each element and the responsibility for its design and manufacture? - NO, not yet !

✓ on
the
web

- | But see "System Hierarchy" and "Master Interface List"
EIS-sys-des-mintlist
- | The system block diagram is "EIS Physical View"
EIS-sys-des-physview
 - This diagram does not show any dimensions
- | These are core documents and will be maintained

System Hierarchy

✓ on
the
web

Title	System Hierarchy
Doc ID	EIS-sys-des-hierarc
Ver	4
Author	Matthew Whyndham
Date	13-Jun-99

Instruments	Mnemonic	Group	Element Name	Components	Components	WBS code	Remarks	Institute	spacecraft interfaces				ICU interface

			Mechanism Power			1a30						x	
			Mechanism Control			1a70							
			Camera Interface			1a40							

- Flight Equipment
 - External - with spacecraft
 - Internal - between components
 - Internal - same institute
 - Test / GSE - non-flight configuration
- Ground Segment
 - similar breakdown ...
- Master Interface List only shows Flight (External, Internal)
 - Test and Ground Segment interfaces not shown

Master Interface List

Title	Master Interface List
Doc ID	EIS-sys-des-mintlist
Ver	2
Author	Matthew Whyndham
Date	27-May-99

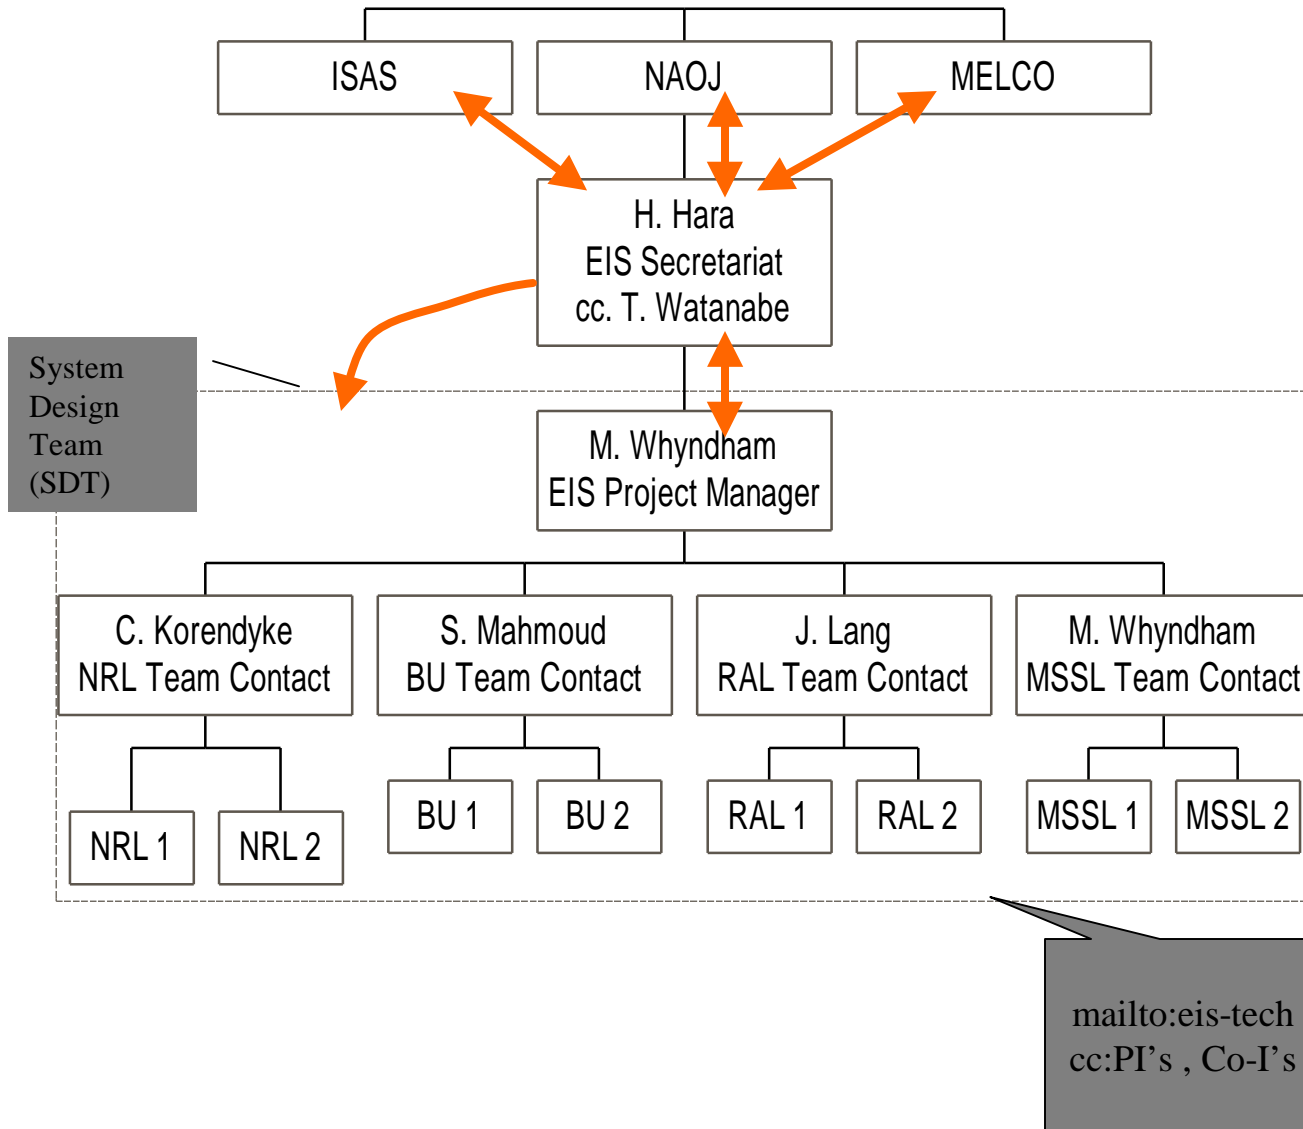

See "System Hierarchy" for explanations of acronyms

Flow of Technical Data / Interface Information

Status of the subsystems

Mass Budget

EIS Mass Budget				
EIS-sys-des-masbud				
Iss	Date	Author	Changes	
3	11-Jun	mwt	Headings and data revised with current Acronyms	
	05-Mar-99	mwt/sm	add Str-mass column	
	05-Feb-99	ck	preliminary	
ref #	Acronym	item	mass (kg)	basis for estimate
1	STR	Structure	25.0	composite structure
	LOK	launch lock	1.0	typical for LASCO type
2	DOR	Door	1.4	based on LASCO door mechanism
3	Optics	Primary Mirror	5.0	Calc May 99
		Mirror Mount		included
		Scan Mechanism		included
		Grating	1.0	Calc May 99
		Grating Mount		included
		grating focus mech.		included
4	Filter	Filters	0.2	typical thickness and stiffness
5	SLA	Slit Assembly	1.0	May-99
6	SHT	Shutter	0.3	typical for direct drive shutter
7	FPA	Focal Plane Assembly	3.0	<i>comprised of:</i>
				CCD mount
				Shielding
				ROE
				Radiator
8	QCM	contamination monitors	0.4	
9		Thermal Control		
		Sensors and heaters	0.2	<i>guess</i>
	MLI	Multilayer Insulation	4.0	15 layer blankets with alternating mesh
a	ICU	Instrument Control Unit	6.0	<i>estimate</i>
b	HAR	Harness	4.0	scaled from LASCO cables
c	CLM	Clamshell	2.5	18x18x5 evacuated cavity
d	MHC	Mechanism/Heater Cor	2.5	<i>guess</i>
e	PUR	Purge Harness	3.0	<i>guess</i>
		subtotal	60.5	
		margin	9.0	
		total	69.5	
		Not included		
		flexible alignment items		

✿ Estimate

- preliminary 6/99
- 45.5 W Average
- 84.19 W Peak
- AJM -> detailed breakdown

✿ Allocation

- ?

✿ Quasi rectangular envelope assumed

- 3200 X 250 X 550
- based on strawman design
- Evolving ...
 - > SM structure concepts

✿ size of thruster tank and space for momentum wheels may

increase, the size and shape of bus structure will be affected by those. When the size and shape of bus structure change, EIS interface points will also be affected. The system side wants to know the size and shape of EIS structure by this reason. If there is a small room in the EIS envelope region which was sent on May 24, the system side can use it as a freedom for the bus structure.

✿ Possible constraints of data flow

- FPA -> ICU
- ICU framestore -> ICU output packets
- ICU -> MDP
 - MDP processing rate
- MDP -> DHU
- DHU capacity
- Ground station link
- Ground segment interfaces

- Explored in more detail later (Software, RAG)
